**THE ECOLOGY CENTER OF ANN
ARBOR AND ENACT PRESENT A
SPRING ENVIRONMENTAL FILM
FESTIVAL**

tappan junior high school

ecology center of ann arbor:

The Ecology Center was opened almost a year ago to provide a continuing outlet for environmental information to the Ann Arbor community. Since that time, the Center has sponsored glass and paper recycling, a community teach-in, a major clean-up on the Huron River, and more than 20 seminars on topics such as land use, pesticides, and lifestyles. In addition to seminars, the Ecology Center produces a weekly radio program, Earth Watch, which explores regional, state and national environmental issues.

Currently, the Ecology Center is involved in promoting several special projects. The "Living With The Earth" seminar series teaches concerned citizens organic gardening and ecologically sound lifestyles. Complementing the seminar series, the community organic garden provides students, faculty, and citizens with opportunities to work together in the planting and care of a cooperative garden. During Earth Week, April 17- 24, the Center is sponsoring several seminars, a bicycle parade, and Earth Fete.

The Center is located at 417 Detroit St., and is open to the public Mon. through Sat., 9 - 5, 761-3186. If you have questions, phone or drop in.

enact:

ENACT is an action-oriented group of students and faculty working to improve the quality of our environment.

ENACT held the nation's largest Teach-In last year! This Teach-In exposed the problems of our environment to literally tens of thousands.

ENACT has worked to stop the S.S.T., testified at the Pipeline hearings and praised President Nixon's closing of the Florida canal.

ENACT urged state legislators to repeal the Coyote bounty, support Environmental Education bills, and liberalize the abortion laws.

ENACT has a Speaker's Bureau that averages 4 speeches a week. Talks have been given to groups ranging from Republicans to Democrats.

ENACT's office is 146F Natural Resources Building, U-M. Phone 764-4410 or 764-4432. Drop in sometime!

film reviews:

March 31: THE WAY WE LIVE

A university student takes last year's Teach-In home to his family. The American consumer is a major polluter of our environment. You must be aware before you can help!

April 7: AIR POLLUTION: TAKE A DEEP DEADLY BREATH

Problems and consequences of air pollution; sources of chemical poisons in the air; relationship of pollution to various diseases; connection between rapid urban growth and pollution; discusses various community action programs and their effectiveness.

April 14: MULTIPLY AND SUBDUE THE EARTH

Our cities are over-crowded, much of the air we breathe is polluted, and the source of our future supply of food and water is in danger. Man must seek not a conquest of nature but unity with nature.

April 21: SLOW DEATH OF DESERT WATER

Discusses man's interference with nature and the destruction of the Pyramid Lake watershed in Nevada.

WILL THE GATOR GLADES SURVIVE

Possible extinction of the species due to man's tampering with the Florida Everglades.
